Dynamic Full Stack Developer with a robust background in Mern Stack and Java. I have successfully delivered projects ranging from a movie ticket booking system and an attendance marker application to a comprehensive college fest website. My strong foundation in data structures and algorithms complements my ability to develop efficient, scalable solutions. Additionally, my hands-on experience in integrating software with hardware for home automation projects underscores my innovative approach to technology and problem-solving.

Experience

CACAMS

June 2024

Amritsar

I have done Summer internship in CACAMS, Amritsar where i learned about HTML, CSS and JS. Then i learned about Node.js which is used for backend development and express.js for routing. I am also familiar with React and its frameworks like NEXT.js and vite

Projects

Movie Ticket Booking

- A website for streamlining the movie ticket booking process
- Added payment gateway
- UI/UX is user friendly

Weather Forecast App

- Used VITE+React for this project
- Integrated API in this app
- App shows wearher via Live location

URL Shortner

- Used Nanold npm package
- This app can shorten the URLs
- Easy to use

E-Commerce website

- Users can easily buy their products
- Added Payment gateways
- Added features using AI
- AI can analyse and tell users about the trending styles and products
